PROFILE

Graphic designer since 2022 and Information Technology student at the University of Abidjan. I design social media campaigns, flyers and brand identities for businesses, events and my university, and I build websites, web applications and desktop applications with HTML, CSS, JavaScript and Python. I enjoy turning real problems, like a shop tracking credit in a notebook, into simple, well-designed solutions.

EXPERIENCE

Freelance Graphic Designer · Self-employed (Baryor GFX) — 2022 – Present

- Designed 20+ projects for clients and concept brands in beauty, fashion, food, real estate, education and events, from single flyers to multi-post campaigns.
- Built consistent campaign systems, including an 8-slide Instagram carousel for a café and a 5-post fashion campaign, keeping layout, colour and type the same across every post.
- Created brand identities and applications (logo, labels, tags, packaging and signage mockups) and delivered print-ready and social-ready files, including a roadside billboard.

Event Flyer Designer · University of Abidjan — 2025 – Present

- Selected by the school to design flyers and announcements for university activities, including the Student Representative Government's Pink October breast cancer awareness event (Oct 2026).
- Worked to deadlines with student organisers, turning event details into clear, readable visuals for print and social media.

PROJECTS

Debt Manager · offline desktop app for a family shop — 2026

- Replaced a paper notebook: records customer debts and payments, calculates each balance automatically and shows the total owed at a glance.
- Reports by day, week, month and year with a printable debtors list and export to Excel; one-click backup to a flash drive with restore.

Tools: Python, local database

Ash Beauty · e-commerce website for a makeup brand — 2026
ash-beauty-nine.vercel.app

- Designed and built the full store experience: product catalogue, shade finder (18 shades, 3 undertones), English/French switch and prices in 10 currencies including FCFA.

Tools: Git, GitHub · Deployed on Vercel

WiFi SaaS · web platform for shops — 2026
wifi-saas.onrender.com

- Web app where each shop registers its own account and manages its WiFi service from a private dashboard; designed the interface and deployed it online.

Tools: Deployed on Render

EDUCATION

B.Sc. Information Technology (in progress) · University of Abidjan — Expected 2028

Coursework: software development, database systems, networking and network programming, web technologies, information systems, Agile and Lean management.

SKILLS
